

CLINICAL ASPECTS OF ISCHEMIC CEREBRAL DISEASE

F. Gerstenbrand, Innsbruck

Wo liegt die Hauptstrategie der sogenannten Intensivmedizin bei cerebro-vaskulären Krankheiten? Welche Effekte kann man von Intensivmedizin erwarten und welche besonderen Methoden soll man betonen? Wie aktiv soll die Behandlung sein und wann sollte man mit restaurativen neurologischen Verfahren beginnen? Wo sollte man Intensivstationen für zerebrovaskuläre Krankheiten organisieren? Wie große Gebiete soll eine solche Station umfassen? Was soll man mit einem akuten Patienten weit vom medizinischen Zentrum tun? Transportieren oder warten. Was sind die „minimal requirements“ für akute Behandlung eines zerebrovaskulären Patienten? CT? Labor?

Dear Professor Gerstenbrand,

It is with great sorrow that I inform you about the sudden and unexpected death of our colleague, friend and President of the Symposium Prof. Poljaković.

The Symposium on Cerebrovascular Disease, which he organized and brought to the final stage of preparation will take place, as announced, on March 29-31 in Zagreb.

I am hereby repeating our cordial invitation to you to give us one of the introductory lectures on:
CLINICAL ASPECTS OF ISCHEMIC CEREBRAL DISEASE.

Your lecture in the duration of 30 min. is scheduled for the morning session on March 29.

As stated in our previous letter, you will be the guest of the Symposium, and we would appreciate to receive from you in due time the times of your arrival in Zagreb and duration of your planned stay, so that hotel reservations can be made and your transportation from the airport be organized.

Looking forward to hear from you and to welcome you in Zagreb,

Sincerely yours,

Prof. Dr. Nikola Gubarev
Chairman, Department and Chair
of Neurology
